

Latinos and Health Coverage: North Dakota by the Numbers

Latinos¹ are more likely to be uninsured than any other racial or ethnic group in the U.S. However, Hispanic families' access to health insurance varies by state (see Figure 1). In North Dakota:

- ❖ **Latinos have inadequate access to the current health coverage system.** In 2008, only two-fifths (40%) of all Latinos living in North Dakota had employer-sponsored health insurance, and just over half (56.4%) were covered by Medicaid or the Children's Health Insurance Program.²
- ❖ **As a result, Latino families are at risk for uninsurance.** That year, about one in ten (9.4%) Latinos in North Dakota were uninsured, including 3.1% of Latino children under age 18 with no form of health coverage.³
- ❖ **Latinos are a small but critical share of the uninsured.** Hispanics made up 1.3% of the total state population in 2008 and represented 1.1% of North Dakota's uninsured.⁴

¹ The terms "Hispanic" and "Latino" are used interchangeably by the U.S. Census Bureau and throughout this document to refer to persons of Mexican, Puerto Rican, Cuban, Central and South American, Dominican, Spanish, and other Hispanic descent; they may be of any race. Furthermore, unless otherwise noted, estimates in this document do not include the 3.9 million residents of Puerto Rico.

² NCLR calculation using data for the U.S. Bureau of the Census, "2009 Annual Social and Economic Supplement," *Current Population Survey*. Conducted by the Bureau of the Census for the Bureau of Labor Statistics. Washington, DC, 2009, http://www.census.gov/hhes/www/cpstc/cps_table_creator.html.
