

## Latinos and Health Coverage: Rhode Island by the Numbers

Latinos<sup>1</sup> are more likely to be uninsured than any other racial or ethnic group in the U.S. However, Hispanic families' access to health insurance varies by state (see Figure 1). In Rhode Island:

- ❖ **Latinos have inadequate access to the current health coverage system.** In 2008, only one-third (33.2%) of all Latinos living in Rhode Island had employer-sponsored health insurance, and about two-fifths (42.7%) were covered by Medicaid or the Children's Health Insurance Program.<sup>2</sup>
- ❖ **As a result, Latino families are at risk for uninsurance.** That year, about one in five (21%) Latinos in Rhode Island were uninsured, and nearly one in six (15.7%) Latino children under age 18 had no form of health coverage.<sup>3</sup>
- ❖ **Latinos are overrepresented among the uninsured.** Although Hispanics made up about one-tenth (10.9%) of the total state population in 2008, they represented nearly one-fifth (19.4%) of Rhode Island's uninsured.<sup>4</sup>

---

<sup>1</sup> The terms "Hispanic" and "Latino" are used interchangeably by the U.S. Census Bureau and throughout this document to refer to persons of Mexican, Puerto Rican, Cuban, Central and South American, Dominican, Spanish, and other Hispanic descent; they may be of any race. Furthermore, unless otherwise noted, estimates in this document do not include the 3.9 million residents of Puerto Rico.
