

Food Insecurity Among Hispanic Children and Families in Florida

Introduction

All children and families should have the opportunity to live a long, healthy, and productive life. However, too many children lack critical building blocks for good health, including consistent access to affordable, nutritious food. Food insecurity affects 35 million Americans. including 10.7 million children.1 and is an especially urgent issue as the COVID-19 pandemic and related economic crisis and job loss continue.

Common Terms and Latino Status

Household food insecurity:

A household-level economic and social condition of limited or uncertain access to adequate food. Latino children are more likely to live in a food insecure household than White children (17% and 10.7%, respectively).²

Household poverty:

Household income is below 100% of the Federal Poverty Level (FPL), or \$26,200 for a family of four in 2020.³ Nearly one in four Latino children lives in poverty, compared to about one in 10 White children.⁴

Low-income households:

Household income is below 200% of the FPL, or \$52,400 for a family of four.⁵ More than half (53%) of Latino children live in a low-income household compared to 26% of White children.⁶

www.unidosus.org PAGE

Latinos* have contributed to the nation's economy for generations yet historically are more likely than the general population to experience food insecurity. COVID-related stressors are exacerbating the situation. Prior to COVID-19, 17% of Hispanic children lived in a food-insecure household compared to 10.7% of non-Hispanic White children. Since the pandemic began, an estimated 47% of Hispanic households with children have reported being food insecure, the highest percentage reported for all racial and ethnic groups.8 The pandemic has also led to a rise in Latino unemployment, from 4% before COVID-19 to a spike of 18.9% in April 2020, and most recently to 8.8% in October 2020.9 Nearly three out of five Hispanic households report a loss of income since the pandemic started.¹⁰ Moreover, increased immigration-related fears have grown as well due to anti-immigrant policies including the U.S. Department of Homeland Security's public charge rule—which have heightened a chilling effect and caused confusion for Latinos regarding access to federal nutrition programs, leading many families to forgo benefits for which their children are eligible. These factors have pushed Latino household budgets to the limit, making it harder to purchase nutritious food regularly. The number of Hispanic households with children reporting not having enough food in the past week has steadily increased since the start of the pandemic, topping out at 21% in the middle of June 2020.12 Without consistent nutritious meals, existing disparities are likely to worsen: Hispanics are more likely than non-Hispanic Whites to develop chronic health conditions, including obesity and diabetes, which places them at greater risk of becoming severely ill or dying from COVID-19.13

Key federal nutrition programs—including the Supplemental Nutrition Assistance Program (SNAP)—help to alleviate poverty and provide resources for children and families to access healthy food. New programs created to mitigate the effects of COVID-19 on child hunger, such as the Pandemic Electronic Benefit Transfer (P-EBT) program, also play a critical role in helping to fill meal gaps, especially in light of school closures nationwide. Yet, food insecurity remains a challenge and is especially pressing in states such as Florida, where the third-largest Latino population in the nation, behind California and Texas, respectively, resides. This brief examines the nutrition landscape that Hispanic children face in Florida to help identify how state policymakers can invest in programs that improve access to nutritious food for all children, including Hispanics, in the state.[†]

Prior to COVID-19, Hispanic Children in Florida Were More Likely to Live in Low-Income, Food-Insecure Households and Experience Health Consequences.

Currently, 5.7 million Latinos live in Florida and account for nearly one in three (32%) children in the state.¹⁴ About 2.8 million Floridians are food insecure, including more than 819,000 children.¹⁵ Before the COVID-19 crisis, Hispanic children in Florida were more likely than Florida children overall to be in vulnerable financial situations and to experience food insecurity.¹⁶

 More than one in five (21%) Hispanic children in Florida was living in poverty, compared to 11% of non-Hispanic White children in the state.¹⁷

PAGE 2 www.unidosus.org

^{*} The terms "Hispanic" and "Latino" are used interchangeably by the U.S. Census Bureau and throughout this document to refer to persons of Mexican, Puerto Rican, Cuban, Central and South American, Dominican, Spanish, and other Hispanic descent; they may be of any race. This document may also refer to this population as "Latinx" to represent the diversity of gender identities and expressions that are present in the community.

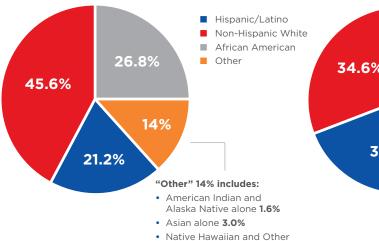

[†] The data in this brief come from the most recent and complete data sets available. As such, data points and comparison years may vary.

- Hispanic children in Florida were more likely to live in a low-income household than all other children (51% and 43%, respectively).18
- Hispanic children in Florida were more likely to experience food insecurity than other groups, with nearly one in five living in a food-insecure household.¹⁹
- Hispanic children in Florida were also more likely to be overweight and obese and experience associated chronic conditions. More than 45% of Latino children in Florida ages 10-17 were reportedly obese or overweight, compared to 25% of White children.²⁰

Proven Nutrition Programs, such as SNAP, Are Critical in Reducing Food Insecurity and Improving Health for Hispanic Children in Florida.

The health and economic crises resulting from COVID-19 have reinforced the important role that federal nutrition programs, such as SNAP, play in providing access to nutritious food. SNAP is the largest federal nutrition program and provides food assistance to nearly 40 million low-income individuals.²¹ The program is also the most effective poverty alleviator in the country. In 2017, SNAP lifted 595,371 Latino children out of poverty.²² Florida's SNAP program is also one of the largest in the nation, serving about 2.8 million Floridians.²³ While Florida Latinos have a higher labor force participation rate (63.9%) than all Floridians (60.6%), SNAP remains critical for Latino families struggling to make ends meet.²⁴ Latinos account for more than one in three (36.4%) of the nearly one million SNAP-participating households in Florida. Hispanic children represent nearly one in three of the nearly 1.1 million children in Florida households who receive public benefits, including SNAP.²⁵

Source: U.S. Census Bureau, 2019 American Community Survey 1-Year Estimates. https://data.census.gov/cedsci/

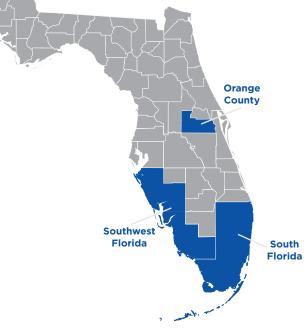

Note: Totals exceed 100% due to rounding and self-identification into more than one category. There is a significant difference in "Other" race/ethnicity category between USDA and Census data. This is due, in large part, to the fact that disclosure of race/ethnicity is not required for SNAP enrollment. Any participant who leaves this field blank or answers with multiple races is included in the "Other" category in the USDA data set. Consequently, the USDA's racial and ethnic data often have a significant share—up to 70%—of participants categorized as "Other."

Food Insecurity Is Especially High in Regions with Large Hispanic Populations.

Florida has some of the highest rates of food insecurity in the nation, especially in regions where a significant share of Latinos resides:

- Orange County is home to more than
 1.38 million people. Nearly one in three
 residents of Orange County is Hispanic.
 More than 108,000 children in Orange
 County are Hispanic. Nearly one in five
 children in Orange County is food insecure.
- Southwest Florida—which is home to Collier, Lee, Charlotte, DeSoto, Sarasota, and Manatee Counties—is increasingly Hispanic. Nearly one in three DeSoto County residents is Hispanic. More than 3,500 children in DeSoto County are Hispanic. DeSoto County has one of the highest rates of food insecurity for children, with nearly one in four children being food insecure.

• South Florida—which includes
Miami-Dade, Broward, and Palm Beach
Counties—is home to one of the largest
concentrations of Latinos in the state.
More than 357,000 Hispanic children live in
Miami-Dade County. More than one in six
children in Miami-Dade County is
food insecure.

Many Florida Hispanics Continue to Experience Barriers to SNAP Participation.

SNAP enrollment has declined for various reasons, leaving too many children in Florida without a stable source of food. Latino children and families face multiple systemic and structural barriers to SNAP participation, including eligibility restrictions, high poverty rates, limited language access services, and inadequate community outreach about the program. These barriers may explain why an estimated four million Latinos nationwide who are eligible for SNAP do not participate in the program, including many who live in Florida.²⁶

Concerns related to immigration status also present a notable barrier to Latino enrollment in SNAP. Recent immigration enforcement and administrative actions contributed to a 10% decrease in eligible SNAP enrollment nationwide and a concurrent increase in child food insecurity among immigrant families.²⁷ While the vast majority of Hispanic children in Florida are citizens (91%), nearly half (49%) live in mixed-status households (i.e., with at least one noncitizen parent).²⁸ Research shows that the public charge rule would

result in a decrease in SNAP enrollment for an estimated 18,000 to 42,000 citizen children in the Miami metro area alone.²⁹ These barriers contribute significantly to leaving Hispanic children in the United States, including Florida, particularly vulnerable to food insecurity, leading to poor health outcomes.³⁰

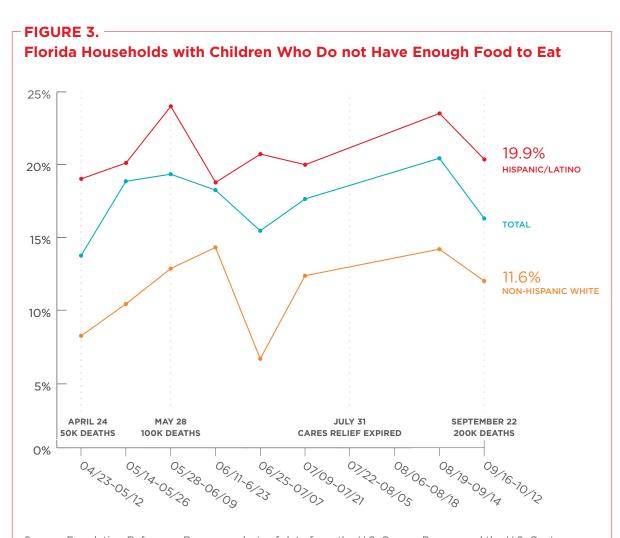

COVID-19 Is Exacerbating Food Insecurity for Hispanic Children and Families in Florida.

As COVID-19 spread throughout the nation, Latinos in Florida were already in a relatively vulnerable position from a health and economic perspective. Congress has taken important steps to address food insecurity in the wake of the pandemic through the creation of the P-EBT program under the Families First Coronavirus Response Act (FFCRA). This program allows states the flexibility to support the nutrition of children who lost access to free or reduced-price school meals when schools closed nationwide. In Florida, the P-EBT program can benefit up to 2.07 million eligible children, or approximately 71% of children in participating schools.³¹ This program has been extended through September 2021.

www.unidosus.org

Still, food insecurity remains especially high for Hispanic children in the state.

- More than half of Hispanic adults in Florida (53.6%) report that they or someone in their household experienced a loss of employment income since March 2020, compared to 39.5% of non-Hispanic White adults.³²
- More than 60% of Hispanic adults in Florida are concerned about being unable to keep up with basic expenses, such as food, because of layoffs or pay cuts due to the pandemic.³³
- Close to 60% of Latinos in Florida are concerned that their children or those of close family members will have trouble accessing free or reduced-price school meals.³⁴
- Latino children in Florida are more likely to have experienced food insecurity during the pandemic. By mid-October, nearly 20% of Latino households with children reported that their household sometimes or often did not have enough food to eat in the past seven days, while 11.6% of non-Hispanic White households did not have enough food.³⁵

PAGE 6 www.unidosus.org

Policymakers Must Invest in Alleviating Persistent Hunger.

The importance of nutrition assistance has never been more apparent. Many Latinos in Florida are on the frontlines of the pandemic in essential jobs, but structural inequities make them more likely to need nutrition assistance programs to keep healthy food on the table. When that assistance is not available, Hispanic families face a significant threat to their health and well-being—hunger. Congress passed temporary interventions to help mitigate the economic effects of the pandemic, including P-EBT. But the persistent need for food assistance among Hispanic families in Florida will not end when the COVID-19-related crisis ends.

State policymakers must step up not only to address the urgent needs of families now, but also to bolster future benefits by taking immediate action to remove barriers and increase participation in federal nutrition programs, such as SNAP. Investments today to strengthen and protect nutrition assistance programs will help ensure that

millions of children, including Latinos, have access to a basic human need and an opportunity for a bright, healthy, and productive future.

About Us

UnidosUS, previously known as NCLR (National Council of La Raza), is the nation's largest Hispanic civil rights and advocacy organization. Through its unique combination of expert research, advocacy, programs, and an Affiliate Network of nearly 300 community-based organizations across the United States and Puerto Rico, UnidosUS simultaneously challenges the social, economic, and political barriers that affect Latinos at the national and local levels.

For more than 50 years, UnidosUS has united communities and different groups seeking common ground through collaboration, and that share a desire to make our country stronger. For more information on UnidosUS, visit www.unidosus.org or follow us on Facebook, Instagram, and Twitter.
